

WHAT IS NODEMreporter

Availability of relevant information on fingertips can help asset managers to make informed decision with confidence.

The user survey has shown that huge amount of data, being collected by asset owners, has not been well utilised in decision making process. As different data are generally stored in different database systems, the asset manager may have to access different systems (and need to learn how to use them). In a lot of cases available queries and reports could be of generic nature requiring some further processing. All these could be extremely time consuming and, hence, discourage them to wait until the latest information is made available.

NODEMreporter is an extremely flexible reporting software platform easily customisable to generate specific information as required by the user. Various viewing and reporting options are integrated together to present information in the best possible ways.

WHAT NODEMreporter CAN DO

NODEMreporter can be used for:

- Integrating data from different sources;
- Processing/manipulating data;
- Viewing data in tabular or multimedia format
- Generating customised reports and graphs;
- Preparing strip maps and GIS thematic maps;

User friendly wizards are available to develop customised reports. NIS provides technical assistance and help desk support for required customization of the software.

OTHER NODEM MODULES

NIS provides and supports other modules including:

- **NODEManalysis** - an optimised decision making tool specifically developed to implement NAMS ODM Guidelines
- **NODEMcdEngine** - for easy access of the data while creating CDs.

NODEMreporter — helps to integrate important data of different assets & present them in the best possible ways to help in making informed decision.

New Zealand Info Systems Ltd

NODEMreporter
(A Flexible Information Generating
Tool for the Asset Manager)

NIS provides software, consulting services in customizing asset management and decision making systems, provides training and help desk support in New Zealand and world wide.

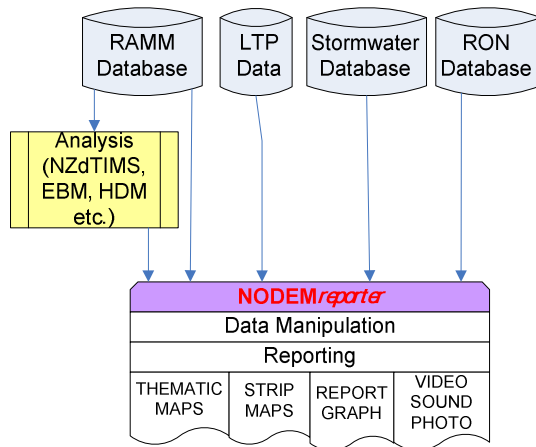

WHO CAN USE NODEMreporter

NODEMreporter is designed as a flexible tool to be used by different level of users, i.e.

- Manager
- Analyst
- Developer

The reports available in the system can be filtered based on access levels for security reason and avoidance of any confusion.

The system can be configured to get (and integrate) data from various existing databases. Data, currently not kept in other systems, but required for decision making, can be stored in **NODEMreporter** Database.

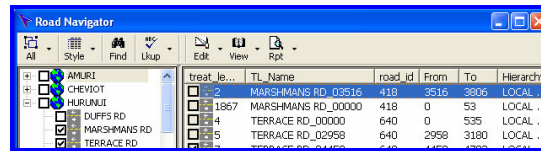

REPORTING OPTIONS AVAILABLE

NODEMreporter can present results in multiple formats such as Reports, Graphs, Tables and Maps. Functionalities available in **NODEMreporter** include:

Data Navigator

- Select asset (eg. Section) from organised data list or map view
- Access available functionality

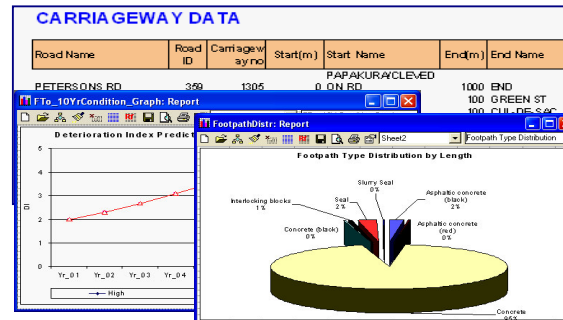

Data View and Manipulation

- Link with other databases or automatic data import
- Create/modify tables for data storage
- Query and filter data and other manipulation functionalities
- Present data in report, graph and map format

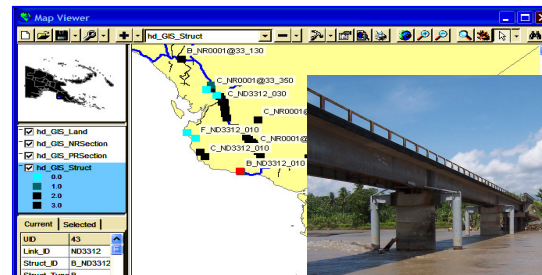

Reports and Graphs

- Generating reports based on customised template
- Generating graphs based on customised template

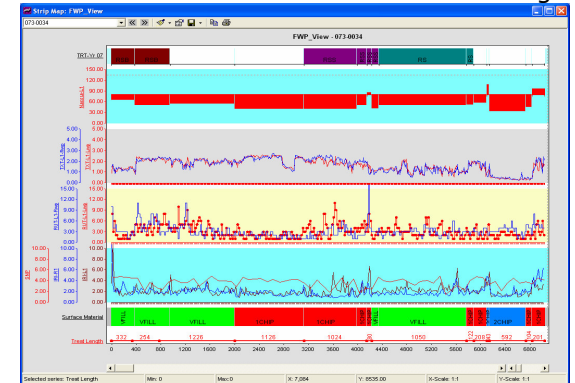

GIS

- Customised Template for Thematic maps;
- Selection of assets for viewing/editing data using strip map, multimedia or in tabular format

Strip Map

- Sophisticated strip map with ability to display values, graphs.
- Allows direct access to data for editing

Multimedia Display of assets in:

- Video
- Photo
- Recorded voice

NODEMreporter has seamless integration with MS Excel spreadsheet. Data extracted can be used for further analysis or other purpose.

CAN END USER CUSTOMISE NODEMreporter

NODEMreporter is one of the most user friendly, powerful yet affordable reporting software available.

NODEMreporter is available in two versions as:

Developer Version provides all tools and functions available in the software for customisation; and,

User Version provides access to data manipulation and reporting functions.

Please contact us for further information on NODEM software products and prices.

Technical presentations are available on website. Please contact us for organising NODEM demonstration to see how you can benefit from its capabilities.
